

10x The Value Of Your Design Portfolio

KEY TAKEAWAYS

1

“Build a Website”

Building a website helps you stand apart from everyone else. It helps you give a more personalised feel to your audience and therefore, a great first impression.

2

“Don't discard your experiments”

Make sure to share your experimental work and don't hesitate to share the highlights of your process. Your process makes you unique and your portfolio should showcase that, too!

3

“Use your best work only”

Remove weak links from your portfolio! People have short attention spans and you want to make sure you capture their attention with your best work only.

4

“Make a mock project”

It will help you break into the category that you've been trying to work towards. This will throw light on your capabilities and vision and help people get insights on them.
